❖ Introduction

The modern era has seen exponential growth in the tourism industry, driven by increasing global connectivity and a growing desire for exploration. In this context, the development of an integrated tourism management system consisting of a user-friendly mobile application and an interactive website emerges as a timely and essential initiative. The project aims to address the multiple needs of tourists, streamlining the planning process, budgeting, and making their experience easier by providing access to personalised recommendations for accommodation, attractions, and knowledgeable tour guides.

The travel management system responds to the complexity of travel planning, which often includes considerations such as number of days to stay, budget constraints, and size of travel party. By providing a platform for travellers to input these variables, Travel management system leverages the power of data driven decision making to generate tailored recommendations, fostering a seamless travel experience. Given the rising demand for customised travel planning solutions, this project is intended as a response to the needs of today's travellers.

Travel management system is made up of a dynamic website and a feature-rich mobile app, guaranteeing accessibility and convenience for a variety of consumers. Travellers' can enter important details such as their duration of stay, their budget, and the number of persons in their party using the system's basic capabilities. After processing this information, the system will give users a list of probable destinations, hotels to look into based on budget, and most importantly a match between visitors and knowledgeable local guides in the chosen locations.

This project's emphasis on customization and user-cantered recommendations is one of its key differentiators. The TMS will give travellers' a special experience by successfully considering their preferences and limitations. The project will also improve the overall tourist experience by facilitating interactions with local guides who can offer information on local culture, history, and secret attractions that conventional guidebooks might miss.

❖ Objectives

- The main objective is to prioritize user experience by providing a user-friendly platform for travelers by planning and managing their trips only by using a Mobile application.

- And also providing a centralized source of information on hotels, tourist destinations and local attractions, budget planning, find travel guides, Tickets booking and simplifying travel planning.

- This platform will also allow simple booking and reservation process by saving time and effort of travelers.

- Develop a user friendly and intuitive booking and reservation system and an application enabling users to book hotels, tourism services effortlessly.

- Integrate trusted and secure payment gateways to do transactions for bookings and services.

- Giving users a safe and important privacy to user data and transactions, adhering to industry standards and regulations.

- Allow users to leave review and ratings for hotels, Places, services, Hospitality and guides to assist other in decision-making.

- Offer customer support by offering phone, emails to assist users with their inquiries and issues.

- Developing a user-friendly application with below features and functionalities;

    - Create an account (Both for tourists and tour guides)
    - Find a tour guide
    - Find tourist attraction destinations
    - Create a budget plan
    - Reserve accommodation
    - Rent vehicle services
    - A roadmap to mapping the places
    - Do transactions
    - Ratings and reviews.
    - Language Translation

❖ Target user

1.**Tourists and Travelers:**

These are the primary users of tourism apps. They could be individuals or groups looking for information about travel destinations, hotels, restaurants, attractions, and activities.

- Traveler:

• Description: General travelers who are planning trips.

• Needs: Trip planning tools, booking capabilities, navigation assistance, access to local insights, and real-time updates.

- Tourist:

• Description: Visitors to a destination, often looking for attractions and experiences.

• Needs: Information on local attractions, tours, activities, and nearby services.

- Business Travelers:

Those who frequently travel for work may use the app to find accommodation, transportation, and information about the local area.

- Adventure Enthusiasts:

People who seek outdoor adventures such as hiking, camping, water sports, or extreme sports may use the app to find suitable destinations and related information.

- Families:

Families traveling with children may need information on family-friendly activities, attractions, and accommodation.

- Photography Enthusiasts:

Travelers interested in photography may use the app to find the best spots for capturing stunning shots

2. Driver:

- Description: Local drivers or transportation service providers.
- Needs: Ability to register as a driver, receive booking requests, manage bookings, access navigation tools, and communicate with travelers.
- Needs: Information on local attractions, tours, activities, and nearby services.

3. Hotel Owner:

- Description: Owners or managers of hotels and accommodations.
- Needs: Ability to list properties, manage bookings, view guest reviews, and update property information.
